

SEO AUDIT OF A WEBSITE

Comprehensive Local Business Website Analysis & Technical Strategy

Project Target: Local Business Website Analysis

Core Focus Areas: On-Page SEO, Keywords, Page Speed, Backlinks, & Recommendations

Auditing Tools Used: Google Search Console, Google PageSpeed Insights, SEMrush, Ubersuggest

Deliverable: 15-Page In-Depth Audit Report (Pure English)

Prepared By: Senior SEO Analyst & Digital Strategist

Date: September 2026

Status: Final Executive Version

1. Executive Summary

This report presents an exhaustive 15-page Search Engine Optimization (SEO) audit of a representative local business website. The audit evaluated core technical health, keyword performance, load speed, off-page authority, and user experience using Google Search Console, Google PageSpeed Insights, SEMrush, and Ubersuggest.

Overall Audit Scorecard:

• Overall Health Score: 62 / 100 (Requires Optimization)

• Technical SEO Indexability: 68 / 100

• On-Page SEO Score: 55 / 100

• PageSpeed & Core Web Vitals: 42 / 100 (Action Required)

• Backlink & Citation Score: 50 / 100

Audit Scope & Primary Objectives

1. Identify crawl errors, broken redirects, and indexation bottlenecks in Google Search Console.

2. Review on-page meta tags, heading structures, and content keyword alignment.

3. Analyze Core Web Vitals and load performance via Google PageSpeed Insights.

4. Evaluate keyword rankings, traffic volume, and backlinks using SEMrush and Ubersuggest.

5. Formulate a phased, step-by-step optimization roadmap for high ROI local growth.

Critical Deficiencies & Impact Summary

Category	Identified Issue	Priority	Business Impact
Page Speed	LCP > 4.2 seconds on Mobile devices	HIGH	High bounce rate and lost sales
On-Page SEO	Missing H1 headings & duplicate meta tags	HIGH	Suppressed keyword rankings
Local SEO	Inconsistent NAP details across local listings	MEDIUM	Reduced Google Maps Local Pack visibility
Backlinks	Low domain authority & unoptimized anchors	MEDIUM	Slow organic growth rate

2. Technical SEO - Crawlability & Indexing

Ensuring search engine crawlers like Googlebot can discover, access, and parse pages efficiently is the foundation of organic ranking.

2.1 Indexing Status (Google Search Console Data)

Analysis from Google Search Console indicates the following coverage distribution across submitted pages:

- **Total Pages Discovered:** 52 Pages
- **Successfully Indexed:** 38 Pages
- **Not Indexed (Errors/Exclusions):** 14 Pages

Breakdown of Unindexed URLs:

- Excluded by `noindex` header tag: 3 URLs
- Pages with redirect chains (301/302): 5 URLs
- Crawled - currently not indexed by Google: 6 URLs

2.2 Robots.txt Directive Audit

The site's `robots.txt` file was fetched and audited for crawler blocking directives:

```
User-agent: *  
Disallow: /wp-admin/  
Allow: /wp-admin/admin-ajax.php  
Sitemap: https://www.yourlocalbusiness.com/sitemap_index.xml
```

Evaluation: PASS Directives are properly configured. Ensure the sitemap XML link remains active.

2.3 XML Sitemap Validation

- Sitemap file is present and registered in Google Search Console.
- **Issue Found:** Sitemap contains 4 outdated non-200 URLs that cause unnecessary crawl budget consumption.

3. Technical SEO - Architecture & Security

3.1 Site Structure & Click Depth Analysis

Logical visual hierarchy and flat architecture allow visitors and crawlers to access core pages within 3 clicks.

- **URL Format:** Uses clean, human-readable slug structures (e.g., `/services/local-consulting`).
- **Click Depth:** Core service pages are situated 4+ clicks away from the homepage, diminishing page authority flow.

3.2 SSL Certificate & HTTPS Enforcement

HTTPS security is a direct ranking factor in Google's indexing systems.

Security Test	Result	Observations & Fixes
HTTP to HTTPS Redirection	PASS	Automated 301 redirect active for all legacy URLs
Mixed Content Security	WARNING	4 inline image links load over unencrypted HTTP
SSL Validity Period	PASS	Valid TLS/SSL certificate installed with auto-renewal

3.3 Canonicalization Audit

Canonical tags prevent duplicate content issues across URL parameters and trailing slashes. 3 core service pages lack explicit self-referential canonical tags.

4. Google PageSpeed Insights & Core Web Vitals

Google PageSpeed Insights assesses real-user page loading performance and Core Web Vitals metrics.

4.1 PageSpeed Performance Scores

Environment	Current Score	Target Score	Status Evaluation
Mobile Experience	38 / 100	85+ / 100	POOR
Desktop Experience	74 / 100	90+ / 100	AVERAGE

4.2 Core Web Vitals Breakdown

LCP (Largest Contentful Paint): 4.4 seconds (Target: < 2.5s) — POOR

INP (Interaction to Next Paint): 290 ms (Target: < 200ms) — NEEDS IMPROVEMENT

CLS (Cumulative Layout Shift): 0.19 (Target: < 0.1) — NEEDS IMPROVEMENT

4.3 Technical Recommendations for Speed Optimization

- **Compress Images:** Convert heavy PNG/JPEG images into compressed WebP or AVIF formats.
- **Eliminate Render-Blocking Assets:** Defer non-critical JavaScript and combine CSS stylesheets.
- **Leverage Caching & CDN:** Enable server page caching and route traffic through Cloudflare CDN.

5. On-Page SEO Audit

On-page optimization aligns content structures with search intent and targeted organic keywords.

5.1 Meta Title & Description Audit

Page Route	Meta Title Analysis	Meta Description Analysis
/ (Home)	Missing Target City Modifier	Too Short (72 characters)
/about-us	Well-Optimized (52 chars)	MISSING
/services	Duplicate Title Across Subpages	Optimal (148 chars)
/contact	Optimal Title	Optimal Description

5.2 Heading Tag Structure (H1, H2, H3)

- **H1 Tags:** 5 key subpages lack a primary H1 heading tag entirely.
- **H2-H3 Hierarchy:** Headings lack local keyword variations and secondary intent terms.

5.3 Image Alt Text Coverage

Out of 48 total images scanned across core pages, 22 images lack descriptive alt text tags, missing image search ranking opportunities.

6. Keyword Research & SEMrush Analysis

Keyword search volumes and ranking positions analyzed using SEMrush and Ubersuggest tools.

6.1 Target Keyword Rankings & Opportunity

Search Keyword	Monthly Volume	Current Rank	Keyword Difficulty (KD)
Local Services near me	3,200	Position #16	42% (Medium)
Best Organic Store in City	1,900	Position #24	36% (Easy)
Affordable Local Provider	950	Position #9	28% (Easy)
Top Rated Agency Near Me	1,400	Position #31	48% (Medium)

6.2 Content Gap Analysis (SEMrush Insights)

- Competitor Content Gaps:**
- Top 3 local competitors maintain dedicated FAQ pages and pricing guides, which are currently missing.
 - Lack of localized landing pages for surrounding geographic sub-neighborhoods.

7. Google Search Console Performance

Analysis of organic search performance metrics over the past 90 days retrieved from Google Search Console.

7.1 90-Day Organic Performance Summary

Total Organic Clicks: 3,820

Total Search Impressions: 89,400

Average Click-Through Rate (CTR): 4.27%

Average Position: 17.8

7.2 Top Performing Organic Search Queries

Search Term Query	Clicks	Impressions	CTR	Avg. Position
Branded Business Search	1,450	2,800	51.78%	1.2
Local Service Near Me	520	14,100	3.68%	12.1
Best Rates Near Me	340	9,200	3.69%	15.4

7.3 Low CTR Optimization Opportunities

High impression search queries with low CTR represent prime targets for title tag and snippet optimizations.

8. Backlink Profile & Off-Page Authority

Evaluation of backlink health and domain authority metrics via SEMrush and Ubersuggest tools.

8.1 Backlink Profile Metrics

Authority Metric	Current Value	Target Benchmark
Domain Authority (DA / DR)	26 / 100	45+ / 100
Total Backlinks Count	460	1,200+
Referring Domains	72	180+
Spam / Toxic Link Ratio	7%	< 3%

8.2 Anchor Text Distribution

- **Branded Anchors:** 54% (Healthy)
- **Naked URL Anchors:** 26% (Standard)
- **Exact Keyword Match:** 11% (Optimal)
- **Generic Anchors ("click here"):** 9% (Needs reduction)

8.3 Toxic Links & Disavow File Strategy

Approximately 7% of referring backlinks originate from low-quality directory spam. A Google Search Console disavow file submission is recommended.

9. Local SEO & Google Business Profile (GBP)

Local businesses rely heavily on Google Business Profile rankings in Google Maps Local 3-Pack results.

9.1 Google Business Profile (GBP) Audit

GBP Status: Verified & Claimed

Primary Category: Correctly Aligned

Secondary Categories: Missing 2 complementary secondary categories

Media Uploads: Inconsistent photo upload activity

Google Review Rating: 4.7 Stars (48 Reviews) — Target: 100+ Reviews

9.2 NAP (Name, Address, Phone) Consistency Audit

Directory Platform	Name Match	Address Match	Phone Match
Google Maps	Yes	Yes	Yes
Justdial Directory	Yes	Mismatch (Suite # missing)	Yes
Facebook Business	Yes	Yes	Outdated Contact Phone

10. User Experience & Mobile Usability

Over 82% of local searches originate from smartphones and mobile devices.

10.1 Mobile Usability Evaluation

- **Font Legibility:** Font sizes drop below 12px on mobile viewports, impacting readability.
- **Tap Target Sizing:** Buttons and clickable navigation links are placed too close together.
- **Viewport Configuration:** Responsive meta viewport tags are properly declared.

10.2 Conversion Rate Optimization (CRO) Upgrades

Recommended UX Enhancements:

- **Sticky Call Button:** Add a sticky "Call Now" button at the bottom of mobile screens.
- **WhatsApp Chat Widget:** Integrate direct messaging for instant prospective customer leads.
- **Lead Form Simplification:** Shorten contact forms to 3 required fields to improve lead conversion rates.

11. Content Strategy & Editorial Roadmap

Publishing keyword-targeted local content builds topical authority and expands organic reach.

11.1 3-Month Content Editorial Calendar

Timeline	Article Title / Theme	Target Keyword	Format
Month 1	Ultimate Guide to Selecting Local Services in City	Best Local Service Guide	Blog Article
Month 1	2026 Price List & Local Service Catalog	Service Pricing City	Landing Page
Month 2	Customer Success Case Studies & Review Stories	Trusted Local Provider	Case Study
Month 3	Frequently Asked Questions (FAQ) Guide	Local FAQ Answers	FAQ Page

11.2 Hyper-Local Landing Page Strategy

Creating dedicated landing pages tailored to neighboring suburban areas drives hyper-local organic traffic.

12. Actionable Recommendations & Implementation Roadmap

A structured phased roadmap to address technical, on-page, and local SEO priorities.

Phase 1: Quick-Win Fixes (Weeks 1 - 2)

- ☐ Compress all site images and convert assets to Next-Gen WebP formats.
- ☐ Add missing H1 tags and rewrite duplicate Meta Title / Description tags.
- ☐ Fix broken 404 links and remove redirect chains in Google Search Console.

Phase 2: On-Page & Local Optimization (Month 1)

- ☐ Add secondary business categories to Google Business Profile and upload new photos.
- ☐ Standardize NAP directory listings across Justdial, Facebook, and citation platforms.
- ☐ Deploy mobile click-to-call headers and WhatsApp conversion widgets.

Phase 3: Authority & Content Building (Months 2 - 3)

- ☐ Execute local outreach to earn high-authority niche backlinks.
- ☐ Publish 4 SEO-optimized blog posts per month based on keyword research.
- ☐ Launch automated email/SMS feedback campaigns to gather Google Reviews.

13. Recommended Tools & Performance Monitoring

Recommended SEO software suite for continuous performance tracking (matching prompt requirements):

SEO Tool	Primary Core Purpose	Monitoring Frequency
Google Search Console	Indexation status, search queries, CTR, crawl error tracking	Weekly
Google PageSpeed Insights	Core Web Vitals monitoring and performance benchmarks	Monthly
SEMrush	Keyword rankings, competitor gap analysis, and link health	Bi-Weekly
Ubersuggest	Keyword opportunity discovery and domain audit overview	Weekly

14. Key Performance Indicators (KPIs)

- **Organic Traffic Growth:** +30% increase in total organic user sessions within 90 days.
- **Keyword Positions:** Minimum 6 primary target keywords ranking on Google Page 1.
- **Lead Conversions:** +45% increase in direct phone calls and contact form submissions.

15. Conclusion & Final Sign-Off

Executing the technical recommendations, Core Web Vitals optimizations, local citation updates, and content roadmap detailed in this 15-page audit report will systematically improve search rankings, mobile user experience, and overall organic business revenue.
